

### Step 1

Place this code inside <head></head> tags, on all .php pages:

```
<!-- (c)2009 www.ieimaging.com - Language Translator -->
<?php
function remove_extension($filename) {
    return preg_replace('/(.)\..*$/','',$filename);
}
?>
<!-- END Language Translator -->
```

---

### Step 2

Place this Translator Form in All necessary .php (Spanish) pages:

```
<!-- (c)2009 Jason James - Language Translator -->
<table width="750" border="0" cellpadding="1" id="Header_LangTrans"
name="Header_LangTrans">
    <tr>
        <td width="619"></td>
        <td width="56"><div align="center">

            <form action="<?php
echo "HTTP://";
echo $_SERVER['SERVER_ADDR'];
echo "/";
echo remove_extension(basename(__FILE__));
echo ".asp";
?>">
                <input type="submit" class="buttonSelector" value="English" />
            </form>
        </div></td>
        <td width="61"><div align="center">
            <form action="<?php echo basename(__FILE__);?>">
                <input type="submit" class="buttonSelector" value="Spanish" />
            </form>

        </div></td>
    </tr>
</table>
<!-- END Language Translator -->
```

---

### Step 3

Place this Translator Form in All necessary .asp pages (English and Jumper pages):

```
<table width="750" border="0" cellpadding="1" id="Header_LangTrans"
name="Header_LangTrans">
  <!-- (c)2009 Jason James - Language Translator -->
  <form>
    <tr>
      <td width="619"></td>
      <td width="56"><div align="center">
        <input type="button" class="buttonSelector"
onclick="self.location=location.pathname" value="English" />
      </div></td>
      <td width="61"><div align="center">
        <input type="button" class="buttonSelector"
onclick="self.location='/es'+location.pathname" value="Spanish" />
      </div></td>
    </tr>
  </form>
  <!-- END Language Translator -->
</table>
```

---

### Step 4

Create a folder in the root directory entitled “es”, place all translated .php (Spanish) pages containing the same page names as the .asp (english) pages in the root directory, in this folder.

---

### Step 5

Create Jumper .asp page named the same as the .php page of its own (for each translated page), containing the javascript redirect tag below:

```
<script Language="JavaScript">
location.href= ('Untitled.php');
</script>
<!-- End Redirect URL -->
<span class="MainContentParagraphText">Si usted no es redireccionado dentro de 30
segundos, el <a href="Untitled.php">Clic Aquí</a>.</span><br />
```

Place these Jumper .asp pages in the same “es” folder the .php (Spanish) pages are inside.

---

That's it, Enjoy!
